About Me

I am Maxime Thirouin, also known as MoOx on the web. I live near Toulouse, France. I am a software engineer specialized in front-end development of mobile & web applications. I love to design and develop UIs. I care about UX, responsiveness, performance, maintainability and scalability. When I am not coding, I like spend my time with my life partner and friends, doing sports, mixing electronic music or doing some more fun stuff.

URBAN DASHBOARD

Exem

Interactive EMF data visualization on city maps

10 months and counting

Built a web application for visualizing electromagnetic field (EMF) data on interactive city maps. Features include site planning tools, cartography layers, measurement clustering, and data exploration panels. Auto-generated API types from OpenAPI specs, i18n support, and a full Storybook-driven component library.

RESTAURANT FINDER

Enjoy App

Mobile app to find food and drinks near you.

2 months

Front-end development for a mobile app that helps you find food and drinks near you, the exact opposite of Uber Eats & friends. From MVP to production, I worked on the app's UI and UX, integrating new features and fixing bugs.

TRANSPORT WEB APP

Hove

Web app built for cities and transport networks

9 months

Development of a web app to ease urban transportation, sell to cities & transportation networks as a white-label app.

- Creation of a modern architecture to re-create a PHP/jQuery web app in React/TypeScript
- Setup of an "all-in-one" build that contains data of all clients and that allows to swap between clients without having to restart the app (to ease QA workflow)

#JavaScript #React #ReactNative #ReactNativeWeb #TypeScript #Git #Lead #Mobile #Maps #Location #Jawg

TRANSPORT MOBILE APP

Hove

iOS / Android app built for cities and transport networks

3 years 6 months

Development of a mobile app to ease urban transportation, sell to cities & transportation networks as a white-label app.

- Stabilisation of the app and simplification of the source code.
- Great simplification of the deployment process for each client
- Great reduction of build and deployment time for client data synchronisation (from several days to a few hours to integrate a modification in production, including QA)
- Setup of an "all-in-one" build that contains data of all clients and that allows to swap between clients without having to restart the app (to ease QA workflow)
- Reduction of the team
- Daily code review to raise the team skills (most developers were new to modern JavaScript & React & React Native)
- Development of features with polished animations that need to work on low-end devices
- Integration of native code & dependencies for iOS & Android & creation of bridges for React Native usage
- Management of several React Native upgrade during the mission

- Making changes to the iOS/Android app to run on the web using React Native Web

MEDIA/TV REMOTE APP

Loewe

TV/media remote app made with React Native, ReScript, GraphQL & Apollo

3 months

Short mission to boost development of a TV/media remote app made with React Native (with ReScript) & GraphQL (with Apollo).

- Re-architecture of the mobile app codebase based React Native with ReScript to simplify it in order to increase ease for contributors.
- Development of various low level React components to ease day-to-day development to follow the rapidly evolving mockups
- Time spend to polish UI details, including development of tons of animations into the React Native app to make it feel really native & not just another weird half web app / half native.
- Transformation of Sketch designs into React components with management of issues not anticipated because of the static aspect of mockups.
- Open source contributions to bs-react-native, React Native bindings for ReScript
- Migration of part of the iOS .xcodproj mess (hand linked libraries, some copy/pasted) into a Cocoapods Podfile to ease React Native updates

#ReScript #JavaScript #React #ReactNative #ReasonReact #ReasonReactNative #GraphQL
#Apollo #Mobile #MQTT #iOS #Auth0 #Cocoapods #Bitrise #Git #Fastlane

RESEARCH & DEVELOPMENT WITH RESCRIPT & GRAPHQL

Experiments and side-projects made with Reason, GraphQL with Apollo & React(Native)

6 months

R&D on ReScript, Ocaml, GraphQL / Apollo, React Native + React Native Web and how to integrate all this technologies together. Actively working on React Native ReScript open source bindings.

TRANSPORT MOBILE APP

Kisio Digital

iOS / Android app built for cities and transport networks

1 year 3 months

Development of a mobile app to ease urban transportation, sell to cities & transportation networks as a white-label app.

- Bootstrapping of the project & creation of a team
- Development of half of the app
- Architecture of the mobile app codebase using React Native.
- Integration of Flow, a static type checker, to improve code quality of the codebase
- Integration of Jest coupled with Storybooks with snapshots to ease day-to-day development & automate testing
- Integration of Detox, a End-to-End Testing and Automation Framework, on local CI system built with Jenkins
- Training of the team, new to React, modern JavaScript, React Native, Jest & Detox
- Management of the white-label customization part via a specific admin interface
- Management of the declination built system with a custom script coupled with Fastlane, an automation tool for deployment & release,
- Remotely leading a team with several developers with different skills & profiles
- Daily code review to raise the team skills (most developers where new to modern JavaScript & React & React Native)
- Development of features with polished animations that need to work on low-end devices
- Transformation of Photoshop designs into React components with management of issues not anticipated because of the static aspect of mockups.

- Integration of native code & dependencies for iOS & Android & creation of bridges for React Native usage
- Migration of part of the iOS .xcodeproj mess (hand linked libraries, some copy/pasted) into a Cocoapods Podfile to ease React Native updates
- Management of several React Native upgrade during the mission
- And I probably forgot some others stuff :)

SPECIFIC ADMIN APP

Mphasis

Web app built to manage dynamic resources with a complex database

9 months

Development of a React web app to manage dynamic resources with a complex database.

- Bootstrapping of the project
- Architecture of the web app codebase using React Native Web.
- Integration of Flow, a static type checker, to improve code quality of the codebase
- Integration of Jest with snapshots to ease day-to-day development & automate testing
- Leading of a team with several developers across the world (France & India)
- Training of the team, new to React, modern JavaScript, React & React Native Web, Jest
- Daily code review to raise the team skills (most developers where new to modern JavaScript & React & React Native Web)

#JavaScript #React #ReactNativeWeb #Flow #Git #Lead #Webpack

2016

WORKFLOW MANAGEMENT MOBILE APP

One2Team

iOS / Android app to manage customizable lists of configurable resources

4 months

Development of a workflow management React/Cordova mobile app to manage customizable lists of configurable resources.

- Architecture of the mobile app codebase using Cordova/Phonegap with React, Webpack, PostCSS
- Training of the team, new to React
- Development of features with polished interactions that need to work on low-end devices
- Integration of native features (eg: Camera & edition with pinch-to-zoom)

2015

TV WEB APP

Molotov.tv

Audit for Molotov.tv fresh React codebase for desktop website

1 month

- Audit on a fresh React codebase
- Adjustements made about "good practices"
- Compilation of a report full of recommendations speed up day-to-day development

#Audit #JavaScript #React #Redux #BestPractices

WEB WIDGET

BeOp

Third-party widget for brands and publishers

6 months

Development of a embeddable widget with React to generate high level of user interactions.

- Architecture of an SDK to ease widget integration for partners
- Engineering of the widget skeleton with React & friends.
- Fast iteration with lots of new technologies (Redux, CSS-in-JS...)

#JavaScript #React #Redux #CSS #PostCSS #Git #Webpack #ThirdParty

FEED UI

Social Share

Social feed of online publications

2 months

Development of a social feed interface.

#JavaScript #Backbone #jQuery

2013

ANALYTICS DASHBOARD

Jirafe (now part of SAP Hybris)

Dashboard with different kinds of widgets for Jirafe analytics

1 year

Development of a new front-end architecture for a rapidly growing dashboard UI.

To avoid the unmaintainable "jQuery & plugins" stack coupled with server side rendered PHP, I decided to start a new version, using Backbone.js with a component approach & a secured API on the back-end.

The entire front-end process use a well crafted Gruntfile to compile our JavaScript files, icons as webfonts, Sass stylesheets, & to generate a styleguide.

#JavaScript #Backbone #jQuery
